Reg. 15(6)

SAM FRAMEWORK

How to Use This List

Institutions are ranked by NPP/SAM demand intensity — based on patient volume, therapeutic complexity, and likelihood of filing Special Approval Medicine applications. **Tier 1 (6 institutions)** should receive immediate outreach; **Tier 2 (8 institutions)** within 3 months; **Tier 3 (12 institutions)** within 6 months. Each entry includes the key decision-maker role and recommended approach.

Ranking Criteria & Tier Definitions

Each institution scored across 5 NPP-relevant dimensions to determine outreach priority

5 Scoring Dimensions

- ▶ **Oncology Patient Volume** — higher volume = more SAM applications filed per year
- ▶ **Therapeutic Complexity** — institutions treating rare cancers, haematological malignancies, and orphan diseases have the highest NPP need
- ▶ **Access to Novel Agents** — institutions running clinical trials or with specialist oncologists are early adopters of unregistered drugs
- ▶ **Institutional Formulary Gaps** — public hospitals with restricted formularies drive the most SAM filings for off-formulary or unregistered drugs
- ▶ **Decision-Maker Access** — ease of reaching the pharmacy director, head of oncology, or medical affairs team

3 Priority Tiers

- TIER 1

National Referral & Federal Specialty Centres
6 institutions. Malaysia's highest-volume NPP filers. These are the anchor accounts — securing a relationship here opens all downstream referrals. Approach within **Month 1**.
- TIER 2

Regional Public & Teaching Hospitals
8 institutions. State-level referral centres with significant oncology and rare disease load. Cover all major regions outside KL. Approach within **Months 2–3**.
- TIER 3

Leading Private Hospitals & Oncology Centres
12 institutions. High-value private sector with clinicians who actively seek novel/unregistered drugs for well-insured or self-paying patients. Approach within **Months 3–6**.

Public vs. Private SAM Pathway — Know the Difference

Public (MOH) hospitals: SAM applications go through the Hospital Pharmacy Director → State Pharmaceutical Officer → Director of Pharmaceutical Services (DPS), MOH. Amana's role is to supply the approved drug. Relationship must be built with *both* the clinician filing the application and the pharmacy team executing the order.

Private hospitals: More flexible — the treating specialist drives the SAM application directly. Relationship with the specialist/oncologist is the primary entry point. Private pharmacy directors also influence preferred supplier selection.

Key Insight: Concentrate First, Then Expand

Winning 3–4 Tier 1 accounts (IKN, HKL, Hospital Ampang, Beacon) gives Amana credibility to rapidly open all other doors. Oncologists and pharmacy directors share supplier intelligence. A reference from a national referral centre is the most powerful sales tool in this market.

Anchor Strategy

Immediate Priority — Approach in Month 1

These 6 institutions generate the highest volume of SAM/NPP applications in Malaysia. Winning these is essential to establishing Amana's market position.

Institution	State	Type	Key NPP-Relevant Departments	Why High NPP Volume	Key Contact Role
Institut Kanser Negara (IKN / NCI)	Putrajaya	MOH	Radiotherapy & Oncology, Nuclear Medicine, Oncology Surgery, Palliative Care, Haemato-Oncology	Malaysia's dedicated national cancer hospital . Highest single-site oncology SAM volume. Treats advanced & refractory cancers where registered drugs are exhausted.	Head of Oncology; Director of Pharmacy
Hospital Kuala Lumpur (HKL)	Kuala Lumpur	MOH	Radiotherapy & Oncology (national referral), Genetics (rare disease national referral), Haematology, Nephrology	National referral centre for oncology AND rare diseases/genetics. Dual role = highest diversity of SAM categories (cancer drugs + orphan/rare disease).	Head of Radiotherapy & Oncology; Genetics Dept Head; Pharmacy Director
Hospital Ampang	Selangor	MOH	Haematology (national referral), Bone Marrow Transplant Unit, Haemato-Oncology, Thalassemia	Malaysia's premier haematology centre . Bone marrow transplants, leukaemia, lymphoma, myeloma — these conditions have the highest use of unregistered novel agents (CAR-T, novel BTK inhibitors, etc.).	Head of Haematology; BMT Unit Pharmacist; Pharmacy Director
University Malaya Medical Centre (UMMC)	Kuala Lumpur	University	Oncology, Haematology, Genetics, Rare Disease Clinic, Neurology, Paediatric Oncology	Leading teaching hospital + research institution. Oncologists are KOLs who drive drug adoption . Paediatric oncology = high SAM need. National rare disease referral for adults & children.	Head of Oncology; Head of Genetics; Pharmacy Director
Hospital Canselor Tuanku Muhriz (UKMMC)	Kuala Lumpur	University	Oncology, Haematology, Rare Disease, Immunology, Paediatrics	One of 3 MOH-designated rare disease management hospitals. Active rare disease clinic driving consistent SAM demand for orphan drugs. Clinical trial site for oncology.	Head of Rare Disease Clinic; Head of Oncology; Pharmacy Director
Beacon Hospital	Petaling Jaya, Selangor	Private	Oncology (ESMO designated), Targeted Therapy, Immunotherapy, Haemato-Oncology, Radiosurgery	Only private hospital in Malaysia with ESMO Designated Centre status (2024–2026) . Specialists routinely use cutting-edge targeted therapies and immunotherapies, many still unregistered in Malaysia. Highest private-sector SAM volume.	Head of Medical Oncology; Head of Haemato-Oncology; Pharmacy Director

Tier 1 Quick Win: Start with Hospital Ampang + Beacon Hospital

Hospital Ampang's haematology team files the most diverse and volume-intensive SAM applications for novel blood cancer drugs in Malaysia — a natural starting point for Amana's oncology SAM expertise. Beacon Hospital provides a private-sector mirror: its oncologists are early adopters of novel agents and have the patient base and payer profile that can absorb premium SAM drug pricing. Win these two first, then use them as references to open IKN, HKL, UMMC, and UKMMC.

Secondary Priority — Approach in Months 2–3

State-level referral centres across Peninsular Malaysia, Sabah, and Sarawak. Each serves a large regional catchment and generates consistent SAM demand.

Institution	State	Type	Key NPP-Relevant Departments	Why Relevant for NPP	Key Contact Role
Hospital Selayang	Selangor	MOH	Oncology, Haematology, Nephrology, Breast & Endocrine Surgery, Palliative Care	Major Klang Valley regional hospital. First Breast & Endocrine Surgery sub-speciality centre in Selangor. High oncology & haematology outpatient volume; overflow referral from HKL and Hospital Ampang.	Head of Oncology; Pharmacy Director
Hospital Sultan Idris Shah (Serdang)	Selangor	MOH	Oncology, Medical, Surgical, Nephrology	Klang Valley tertiary hospital. UPM-affiliated teaching hospital with specialist oncology. Serves large southern Selangor population; second-line oncology referral for patients in Sepang, Nilai, Kajang corridors.	Head of Oncology; Pharmacy Director
Hospital Raja Permaisuri Bainun (HRPB)	Perak	MOH	Oncology, Haematology, Genetics/Rare Disease, Nephrology	One of 3 MOH-designated rare disease management hospitals. Serves all of Perak and Northern Peninsular. Rare disease SAM applications are a regular feature of this pharmacy's workflow.	Head of Oncology; Rare Disease Clinic Lead; Pharmacy Director
Hospital Universiti Sains Malaysia (HUSM)	Kelantan	University	Oncology, Haematology, Rare Disease, Paediatric Oncology, Radiotherapy	East Coast anchor teaching hospital. Serves Kelantan, Terengganu, Pahang. High rural-to-referral patient flow. Oncologists in East Coast have limited access to novel agents — SAM is a critical pathway here.	Head of Oncology; Pharmacy Director; Head of Haematology
Hospital Sultanah Nur Zahirah (HSNZ)	Terengganu	MOH	Oncology, Haematology, Rare Disease	One of 3 MOH-designated rare disease management hospitals. Terengganu state referral for oncology. East Coast rare disease hub — consistent SAM applications for both oncology and metabolic/genetic disorders.	Head of Oncology; Rare Disease Coordinator; Pharmacy Director
Hospital Sultan Ismail (HSI), Johor Bahru	Johor	MOH	Oncology, Haematology, Radiotherapy, Medical Specialties	Primary public oncology referral for Johor — Malaysia's 2nd most populous state. High patient volume from Johor Bahru and surrounding districts. Strategic due to proximity to Singapore cross-border pharmaceutical trade.	Head of Oncology; Pharmacy Director
Hospital Pulau Pinang	Penang	MOH	Oncology, Haematology, Radiotherapy, Surgical Oncology	Northern Malaysia's main public oncology centre. Serves Penang, Kedah, and northern Perak. High-volume state cancer referral; handles overflow from private Penang hospitals.	Head of Oncology; Pharmacy Director
Hospital Umum Sarawak (HUS), Kuching	Sarawak	MOH	Oncology, Haematology, Radiotherapy, Rare Disease	Only major cancer centre in all of Sarawak. Serves the entire 2.8 million Sarawak population. Very	Head of Oncology; Head of

Tertiary Priority — Approach in Months 3–6

12 private institutions with high NPP propensity. Private sector specialists are the most proactive SAM filers — they have demanding patients, flexible prescription authority, and payers who can fund unregistered drugs.

Institution	State	Key Oncology Credentials	NPP Relevance	Recommended Approach
Subang Jaya Medical Centre (SJMC)	Selangor	First Asia Pacific ACHS Centre of Excellence for Oncology (2023); JCI accredited 2022; SJMC Cancer & Radiosurgery Centre	High-acuity oncology cases; radiosurgery patients often need novel drug combinations not yet registered. Strong haemato-oncology unit.	Approach Head of Oncology + Pharmacy Director. Highlight Amana's ability to source novel biologics for complex protocols.
Sunway Medical Centre	Selangor	ESMO Designated Centre 2018–2024; 6 radiotherapy machines incl. Gamma Knife ICON; 724 beds; largest private RT centre	Gamma Knife and advanced RT patients often require concurrent unregistered radiosensitising drugs or immunotherapy agents.	Leverage Amana's oncology portfolio knowledge. Offer Amana as the specialist SAM navigator for novel immunotherapy combinations.
Gleneagles Hospital KL (IHH)	Kuala Lumpur	IHH flagship hospital in KL; comprehensive oncology unit; significant haematology and medical oncology specialist panel	IHH group oncologists manage high-value patients who expect access to the latest therapies. Multiple specialists = multiple SAM filing opportunities.	Engage via IHH central pharmacy procurement or individual specialist approach. Position as preferred SAM supplier for IHH network.
Pantai Hospital KL (IHH)	Kuala Lumpur	First private bone marrow transplant in Malaysia; strong haematology; Pantai Hospitals has 9 locations nationwide	BMT unit = highest private-sector SAM demand for haematology drugs (CAR-T, novel conditioning agents, graft-vs-host prophylaxis). Key account for blood cancer SAMs.	Prioritise haematology team. Offer dedicated SAM support for BMT protocols and haematological malignancy novel agents.
Prince Court Medical Centre	Kuala Lumpur	JCI accredited; Medical Tourism Hospital of the Year 2023–2025; Oncology Centre with multi-disciplinary team	Medical tourism hub — foreign patients often arrive seeking specific drugs not yet approved in their home country OR in Malaysia. Very high SAM utilisation for niche indications.	Position Amana as the go-to SAM supplier for international patient requests. Stress fast procurement timelines and broad principal relationships.
KPJ Damansara / KPJ Damansara 2	Selangor	First Malaysian hospitals in Mayo Clinic Care Network (2024); KPJ Healthcare's flagship KL hospitals	Mayo Clinic Care Network affiliation means specialists are exposed to US treatment protocols, many involving unregistered agents in Malaysia.	Target via KPJ Healthcare central procurement. Mayo Clinic protocol alignment = specific SAM drug needs Amana can proactively source.
Thomson Hospital Kota Damansara	Selangor	OncoCare Cancer Centre launched Nov 2024 (Singapore brand); comprehensive oncology services	New OncoCare facility brings Singapore's approach to novel drug access to Malaysia. Singapore specialists are familiar with compassionate use — will drive SAM applications.	Approach OncoCare Medical Director directly. New centre = no entrenched supplier relationships yet. Amana should establish preferred supplier status early.
Island Hospital Penang	Penang	Icon Oncology partnership (Jan 2024 / launched Aug 2025); comprehensive haemato-oncology	Icon Group is an Australian-origin global oncology network — their protocols include latest novel agents from Australia and globally, many not yet approved in Malaysia.	Approach Icon Oncology Malaysia pharmacy team. Icon's global protocols create predictable SAM demand for specific pipeline drugs.
Mount Miriam Cancer Hospital	Penang	Penang's only dedicated cancer hospital; Catholic Welfare Services;	Dedicated cancer-only facility — 100% of pharmacy spend is oncology. Specialists are focused, high-volume	Approach Hospital Director + Pharmacy Director. Dedicated

How Amana Should Approach Each Institution

Proven BD tactics tailored to the NPP/SAM procurement context in Malaysian hospitals

WHO TO MEET FIRST

- ▶ **Public hospitals:** Hospital Director of Pharmacy (Pengarah Farmasi) — they control SAM procurement approvals and supplier selection. Followed by the Head of Oncology / Haematology who writes the prescriptions.
- ▶ **Private hospitals:** Lead Medical Oncologist or Haemato-Oncologist first — they drive drug selection. Then Pharmacy Director for supplier onboarding.
- ▶ **Teaching hospitals:** Head of Department + Head of Pharmaceutical Services — dual entry is required as academic physicians also influence formulary additions.

OPENING CONVERSATION POINTS

- ▶ "We specialise in Special Approval Medicines under Regulation 15(6) — we manage the entire application process so your team doesn't have to."
- ▶ "We have relationships with principals across oncology, rare disease, and specialty therapeutics — including drugs not yet registered in Malaysia."
- ▶ "Our turnaround on SAM documentation and supply is typically 2–4 weeks faster than generalist distributors."
- ▶ "We cover all 4 therapeutic areas: oncology, rare disease, chronic NCDs, and general specialty — one relationship for all your unregistered medicine needs."

DOCUMENTS TO BRING

- ▶ Amana Pharma company profile with SAM/NPP track record (include case examples anonymised)
- ▶ List of principals / drug portfolio accessible via Amana's SAM channels
- ▶ A one-page SAM process flowchart showing Amana's role at each step
- ▶ Cold chain and GDP compliance certificates
- ▶ Reference letters from existing hospital pharmacy clients
- ▶ NPRA import license and MOH Type A special conditions distributor appointment letter

DIFFERENTIATOR HOOKS BY INSTITUTION TYPE

- ▶ **National referral centres (IKN, HKL, Hospital Ampang):** Emphasise breadth — Amana can supply across all therapeutic areas, not just one category.
- ▶ **East Malaysia (HUS, KPJ Sabah):** Emphasise reliability of East Malaysia supply and cold chain commitment — this is their biggest pain point.
- ▶ **Rare disease hospitals (HRPB, HSNZ, UKMMC):** Emphasise Amana's orphan drug access and familiarity with NPRA's Malaysian Orphan Medicines Guideline 2020.
- ▶ **New oncology centres (Thomson/OncoCare, Island/Icon):** Emphasise Amana as a founding preferred supplier before competitors establish relationships.

6-Month BD Rollout: 26 Institutions, Systematic Coverage

Month 1: IKN, HKL, Hospital Ampang, UMMC, UKMMC, Beacon (Tier 1) | Months 2–3: All 8 Tier 2 regional hospitals | Months 3–6: All 12 Tier 3 private hospitals. Track each institution's SAM volume and win rate to prioritise follow-up resources.

26 in 6 Months
